

INTEROFFICE CORRESPONDENCE

DATE: November 9, 1992
TO: E. H. Ideker, Facility Management & Operations, Building 111
FROM: R. T. Stagner, 800 Operations, Building 881, X7864 *WTS*
SUBJECT: VISITATION BY DAVE MAXWELL (EPA), RTS-180-92

On November 4, Dave Maxwell, Environmental Protection Agency (EPA) toured Building 881, 865 and 883 for the purpose of viewing Operable Unit (OU) 15 Individual Hazardous Substance Sites (IHSS) in those buildings. Dave was accompanied by T. A. Moore, Remediation Project Management. A number of other visitors were to have been on this tour, however security authorizations were not obtained by Remediation Project Management.

Dave was escorted in Building 881 by myself, John Lyons (Utilities), Tim Elmont (Gen Labs), and Julian Valdez (Gen Labs). In Building 865, the escorts were again myself, Mike Stewart (Building Manager) and Fred White (Gen Met.). In Building 883, Mike Stewart and Stan Rohrig (Met Ops.) provided escort service.

Areas visited included room 165, 266B, and 131C in Building 881, room 145 in Building 865 and room 104 in Building 883.

Although the notification process did not occur as expected, the areas were walked down prior to the visit, and the pre-inspection guide followed.

The purpose of the visit was to view IHSS 178, 179, 180, 211, and 217. These IHSSs are included in the Phase I RCRA Facility Investigation (RFI)/Remedial Investigation (RI) for OU15. During the tour questions were asked concerning previous activity in the IHSS locations, but no specific issues were brought up. Dave did question the advisability of cleaning up some of the areas while the building is still use, especially in the Radiological Control Areas (RCA). There were no programmatic impacts from this visit, however we did briefly discuss the Transition Plan. It appeared that no connection has been made between the Phase I RFI/RI and the Transition Plan.
